

5 What is claimed is:

1. An overflow system for a bathtub which has a bottom, and adjacent side and endwalls, a drain port in the bottom, and overflow port in an endwall, comprising,  
10 a drain pipe adapted to be in communication with said drain port and said overflow port,  
said drain pipe having an inverted L-shape, including a horizontal leg extending into and through the overflow part of the bathtub, and a vertical leg  
15 extending downwardly for connection to a fluid drain system,  
threads on the horizontal leg extending through the overflow port, and  
a cap threadably mounted on an end of the horizontal leg  
20 extending through the overflow port,  
the cap having an opening in its circular planar end, with a thin sealing membrane secure to the cap and extending over the opening in the circular planar end.  
25
2. A plumbing test system comprising,  
a pipe having a first exposed end and second end in communication with a fluid source, wherein the first end comprises a threaded portion;  
30 a cap assembly threadably mounted on the first end and wherein a portion of the cap assembly is composed of a material capable of sealing the first end when the cap is threaded onto the first end;  
the cap assembly contains a cap having an opening in a  
35 planar end, with a sealing member secured to the cap and extending over the opening in the planar end.

5           cap and extending over the opening in the planar  
end.

3.    The device of claim 1 wherein the cap has a  
circular planar end with a perimeter terminating in an  
10 externally threaded annular flange for interconnection  
with internal threads on the horizontal leg.
